

Module 2: Hands-On – 1

Using a Callback with setTimeout

Step 1: Create a file named callback.js

Step 2: Open it in any text editor

Step 3: Type the following code:

```
cb > JS callback.js > ...
1  function timer(time, callback) {
2    setTimeout(() => { callback(time) }, time)
3  }
4
5  timer(2000, (x) => {
6    console.log(`Done after ${x}ms`)
7  })
8
```

Step 3.1: Create a function named **timer** that takes time in milliseconds and a **callback** that accepts time as its argument to be run after the specified milliseconds have passed using the `setTimeout` function

```
cb > JS callback.js.js > ...
1  function timer(time, callback) {
2    ... setTimeout(() => { callback(time) }, time)
3  }
4
5  timer(2000, (x) => {
6    ... console.log(`Done after ${x}ms`)
7  })
8
```

Step 3.2: Call the timer function with 2000 ms as its first argument

```
cb > JS callback.js.js > ...
1  function timer(time, callback) {
2    ... setTimeout(() => { callback(time) }, time)
3  }
4
5  timer(2000, (x) => {
6    ... console.log(`Done after ${x}ms`)
7  })
8
```

Step 3.3: Pass in callback that accepts the time passed in milliseconds as arguments from the caller and log it to the console

```
cb > JS callback.js.js > ...
1  function timer(time, callback) {
2    ... setTimeout(() => { callback(time) }, time)
3  }
4
5  timer(2000, (x) => {
6    ... console.log(`Done after ${x}ms`)
7  })
8
```

Step 4: Open the command prompt in the same directory as the file

```
C:\Windows\System32\cmd.exe
Microsoft Windows [Version 10.0.18362.476]
(c) 2019 Microsoft Corporation. All rights reserved.
C:\Users\Intellipaat-Team\Desktop\Module 2\cb>
```

Step 5: Run the file using the command 'node callback.js'

```
C:\Windows\System32\cmd.exe
Microsoft Windows [Version 10.0.18362.476]
(c) 2019 Microsoft Corporation. All rights reserved.
C:\Users\Intellipaat-Team\Desktop\Module 2\cb>node callback.js.js
Done after 2000ms
C:\Users\Intellipaat-Team\Desktop\Module 2\cb>
```
